3M Electronic Monitoring

One-Piece GPS Offender Tracking System

3M™ One-Piece GPS Tracking System was designed for offender monitoring operations where administrations seek accurate and reliable real-time tracking along with effective enforcement of home detention curfews.

The One-Piece GPS Tracking System offers a robust integration of tracking, communication and mapping technologies that enable operators to efficiently track offenders, indoors and out, at varying levels of intensity.

The system design is based on a widely used one-piece offender tracking device, successfully supporting dozens of government agencies in their daily offender supervision programs.

The One-Piece GPS Tracking System also serves as a curfew monitoring system, and will report on technical events or violations of schedule restrictions, enabling agencies to apply home curfew restrictions in line with their program.

One-Piece GPS Tracking System
Featuring
Full House Arrest Supervision

3M™ One-Piece GPS Offender Tracking System is also known as 1Track by Elmo-Tech or WMTD by Pro Tech Monitoring.

- Multiple tamper detection mechanisms
- Back-up location detection using LBS
- Continued tracking and zTwo-way communication with offender through LED lights and vibrating alerts
- User configurable alerts and program rules
- Functionality status indications
- Compact and lightweight 170gr/6oz
- Hypoallergenic, waterproof and tamper resistant
- Securely fits on offender's ankle using an adjustable, easy to install strap
- 24-hour battery life

Tight Audit of Offenders

Each monitored offender is assigned a One-Piece GPS tracking unit, which continuously tracks them in real-time. The units store and process the tracking data and communicate with the monitoring center and assigned officers to report locations or violations. Alerts are pre-set to individual schedules and zone restrictions. At offenders' homes, the One-Piece GPS tracking unit is paired with a local beacon unit, which acknowledges offenders' presence upon arrival. Relevant violations are communicated to offenders in addition to designated program administrators and officers.

Active, Hybrid or Passive - Varying Levels of Supervision Intensity

The One-Piece GPS Tracking System can be activated in any one of the three tracking levels, which differ on communication frequency and resulting supervision intensity. Offenders can be seamlessly switched from one level to the other.

Empowering Supervision Programs Through Integrated Monitoring Capabilities

3M™ One-Piece GPS Tracking System can be applied as a separate measure or in combination with other monitoring or tracking tools. Interchangeability of field units and transmitter models enable the seamless transfer of offenders across different programs and monitoring applications for efficient case and resource management.

An Industry Leader

3M Electronic Monitoring is a global provider of leading presence and location verification technologies, designed for monitoring individuals in the law enforcement, corrections and security markets. The integration of 3M Electronic Monitoring systems in a variety of law enforcement applications is proven to be cost effective and reliable. The Company's strategy is to focus on the provision of superior technology solutions while collaborating with prominent local business partners to ensure the optimized distribution and service of its systems worldwide. 3M Electronic Monitoring systems are employed by private operators and government agencies throughout Europe, Latin America, the Middle East, the Pacific Rim and the U.S.A. 3M Electronic Monitoring brings its customers and partners nearly 2 decades of industry experience and technology expertise. 3M Electronic Monitoring is part of Track and Trace Solutions within 3M's Safety, Security and Protection business.
