Integrated Monitoring Platform

3M Electronic Monitoring's Integrated Platform offers a full range of interchangeable electronic monitoring tools and communication technologies, enabling operators to integrate previously separate monitoring tools and software modules onto a single platform. The implementation of this unique concept enables significant financial and operational performance improvement to control center and field officers' workflow.

The same transmitter is compatible across the different field units and monitoring programs (RF, GPS, Alcohol Monitoring, Inmate Tracking), allowing for seamless and flexible transfer of offenders between monitoring programs, resulting in enhanced program and caseload management capabilities.
There is a host of applicable combinations to accommodate varying levels of supervision and cater to the evolving needs of intensive supervision schemes.

Cost Efficiency

3M Electronic Monitoring's integrated platform solution allows operators to make the most of technology benefits and tailor them to program needs.

Streamlining monitoring over a single platform enhances the overall value of the program by reducing initial investment. Installation and support costs are lowered, system management and maintenance capabilities are improved, and training requirements and inventory management load are reduced.

Integrated Platform - Single Database and Software Interface

Data entries reported from the different monitoring programs are logged into a single database source, providing comprehensive data management, increasing reporting capabilities and enabling improved tracking of offender compliance.

Integrated Platform - Single Communication Hub

- Streamlines incoming and outgoing communication
- Manages information derived from multiple incoming channels
- Distributes information to multiple reporting channels on scheduled, real time and on demand basis

Mix & Match: Integrating Different Monitoring Tools Accommodates Varying Levels of Supervision

- Multiple locations monitoring: Perform intensive supervision in multiple locations, using the same or different monitoring tools
- Enhanced presence monitoring: Enhance RF presence monitoring with automatic confirmation based on biometric verification
- Remote alcohol monitoring: Apply a remote alcohol monitoring scheme combining visual verification with RF based home detention
- Track inmates in prison & outdoors: Combine RF based area monitoring inside correctional facilities with GPS tracking for prisoners on leave
- Shift between landline and cellular based communication monitoring units in accordance with infrastructure availability

An Industry Leader

3M Electronic Monitoring is a global provider of leading presence and location verification technologies, designed for monitoring individuals in the law enforcement, corrections and security markets. The integration of 3M Electronic Monitoring systems in a variety of law enforcement applications is proven to be cost effective and reliable. The Company's strategy is to focus on the provision of superior technology solutions while collaborating with prominent local business partners to ensure the optimized distribution and service of its systems worldwide. 3M Electronic Monitoring systems are employed by private operators and government agencies throughout Europe, Latin America, the Middle East, the Pacific Rim and the U.S.A. 3M Electronic Monitoring brings its customers and partners nearly 2 decades of industry experience and technology expertise. 3M Electronic Monitoring is part of Track and Trace Solutions within 3M's Safety, Security and Protection business.
