

Inmate Tracking System

Enhancing Prison Security and Management Efficiency

3M™ Inmate Tracking System performs real-time monitoring of people and objects within correctional facilities and the campuses around them. 3M™ Inmate Tracking System was designed to meet the challenges of managing correctional facilities, accounting for inmate, staff member, visitor and asset locations, 24 hours a day.

The System's wireless architecture, flexible installation and modular components proved to be a highly cost-effective retrofit solution in various types of indoor and outdoor settings of varying sizes.

- Real-time inmate tracking
- Enhanced staff, visitor and inmate safety
- Prompt alerts to violations
- Off-site monitoring
- Automatic headcounts
- Inmate schedule and zone authorization control
- Integration with other facility security and management systems
- Customizable historic logs and reports
- A decade of direct worldwide field experience

Prompt Alerts to Violations

3M™ Inmate Tracking System can alert staff and facility management to a variety of situations and deviations from standard facility rules. Violations alerts are based on user definitions and required reporting intensity, and can be transmitted via local pagers, text messaging or email:

- Officer down alerts
- Headcounts mismatch
- Violation of schedule and zone restrictions by inmates and visitors
- Attempts to tamper with personal tags, monitoring equipment or tracked assets
- Impermissible proximity between individuals and groups

Enhanced Officer Safety

3M™ Inmate Tracking System offers a number of options for staff duress units, and can relay alerts to relevant personnel in real time indicating the incident and its exact location. For added security, the unit triggers an alarm if an officer goes down or if the unit is forceably removed.

Simple Setting of Schedule and Zone Rules

3M™ Inmate Tracking System supports unlimited schedule and zone restriction settings for each monitored individual within the facility. Monitoring resolution can be flexibly configured to accommodate specific facility needs.

L. Stender, Former Associate Warden of Operations at MCF Faribault, where 3M™ Inmate Tracking System has been in service for over 8 years, explains:

“We chose this technology because it was a cost-effective means. The cost of preventing one walk-away is a major saving in dollars and enhanced security for our surrounding community.”

Enhancing Prison Security & Management Efficiency

Integration with Other Security Systems

3M™ Inmate Tracking System can interface and work with other security and management systems to provide a complete solution. The System's alerts trigger door lockdowns and CCTV focuses to help improve response time and tighten security.

Automatic Headcount

3M™ Inmate Tracking System can provide headcount status of all categories of tracked people and objects anytime at a push of a button. The System can be configured to report at all times or just if there's a change from standard count.

Effective Logging and Reports Generation

The system stores monitored individuals' violation records as well as locations and status, providing facility's management a series of customizable investigative reports. Such logs can be retrieved to analyze and support event investigations.

Mobile Monitoring Unit - Portable Real-Time Monitoring of Groups on the Move

3M Electronic Monitoring further offers a group mobile monitoring unit, designed to monitor multiple offenders in mobile situations, such as transports or off-site work crews. The mobile unit enhances officers' safety and their ability to supervise the group effectively.

L. Stender, Former Associate Warden of Operations at MCF Faribault, explains:

"We were looking for technology that would give timely notification of any offenders leaving their designated work or living areas... The technology provides greater public safety through timely notification."

Full Compatibility with Other 3M Electronic Monitoring Systems

3M™ Inmate Tracking System utilizes the same proven set of uniquely designed field units used for home detention and offender GPS tracking programs. Full compatibility allows for flexible implementation of correctional programs requiring continuous monitoring outside the facility such as GPS tracking of prisoners on leave.

An Industry Leader

3M Electronic Monitoring is a global provider of leading presence and location verification technologies, designed for monitoring individuals in the law enforcement, corrections and security markets. The integration of 3M Electronic Monitoring systems in a variety of law enforcement applications is proven to be cost effective and reliable. The Company's strategy is to focus on the provision of superior technology solutions while collaborating with prominent local business partners to ensure the optimized distribution and service of its systems worldwide. 3M Electronic Monitoring systems are employed by private operators and government agencies throughout Europe, Latin America, the Middle East, the Pacific Rim and the U.S.A. 3M Electronic Monitoring brings its customers and partners nearly 2 decades of industry experience and technology expertise. 3M Electronic Monitoring is part of Track and Trace Solutions within 3M's Safety, Security and Protection business.
