Transforming Auscultation Education

3M™ Littmann®
Listen-In Mobile App

Transforming Auscultation Education

Utilising the award winning 3M™ Littmann® Model 3200 Electronic Stethoscope with Bluetooth® technology, it is now possible for clinical educators to share sounds with up to four trainees.

The Littmann Listen-In Mobile Application redefines the traditional limits of auscultation education by delivering a wireless, simultaneous sound experience for multiple clinicians.

Littmann Listen-In mobile app enables an Android device to link with a maximum of five Littmann model 3200 stethoscopes. One stethoscope acts as the Presenting stethoscope while the other 1-4 stethoscopes act as Listening stethoscopes.

Share the exceptional sound quality of the Littmann model 3200 electronic stethoscope (with 24x amplification and 85% ambient noise reduction), for a more efficient and patient friendly auscultation experience. TRANSMIT, TEACH, LISTEN, LEARN

- Reduces the length and increases the efficiency of teaching sessions and ward rounds
- Reduces stress on patients from fewer interventions by students
- Presenting stethoscope can be easily switched to Listening stethoscope, enabling teacher to listen to student
- Digital capture ensures perfect sound reproduction between one Presenting stethoscope and up to four Listening stethoscopes
- Improves the confidence of both educator and trainee, as there is certainty of the sounds that are being observed
- Connects to all five Littmann model 3200 stethoscopes within seconds
- Presenting stethoscope controls the filter (Bell, Diaphragm, and Extended Range) on all stethoscopes whilst each stethoscope has independent control of the volume

Littmann Listen-In Description:

Each system contains five Littmann model 3200 electronic stethoscopes, one Android phone/device and Listen-In software.
