

3M Mobile Interactive Solutions

3M™ Specialty Display Products

Specialty Display Solutions

For the Healthcare Industry

Advanced film products designed to improve privacy compliance and display performance

Integrating 3M™ Display Privacy and Protection Films offers you new options for visual security and display protection. 3M provides customized solutions to meet the demands of the growing healthcare industry:

- Embedded privacy louvers for permanent visual security
- Privacy filters to protect the front of displays and provide selective viewing options
- Durable protection films to minimize scratches and scuffs to displays

Advanced Optics and Enhanced Durability For Healthcare Displays

Healthcare organizations rely on displays to provide immense amounts of data and patient information. 3M provides reliable solutions, using emerging display techniques, to meet the specific needs of the healthcare industry in privacy compliance and protection.

3M provides complete solutions for the healthcare industry:

- 3M image experts provide customized options for enhanced display optics
- Products are backed by industry-leading engineering expertise and ongoing customer service support
- High-quality 3M products differentiate and add value to your products and provide assurance to your customer
- Privacy and protection solutions to fit every display
- Removable, integrated in the bezel or behind the glass and framed product options

3M™ Privacy Products offer new options for meeting compliance with privacy regulations

Healthcare organizations must secure private information to be in compliance with The Health Insurance Portability Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act, which expands the reach of HIPAA, extending privacy requirements to electronic healthcare data and requiring facilities to be in compliance by September 2010.

3M™ Privacy Products:

- Act as a physical safeguard against unauthorized viewing of patient information.
- Provide visual security on mobile devices used for patient rounds.
- Darken screen data when viewing from the side. User sees clearly while others see a dark screen.

Integrated solutions for permanent privacy

For permanent privacy control, 3M™ Advanced Light Control Film (ALCF) can be placed inside displays located in areas where information must be secured at all times. Microlover films help control the distribution of light to provide privacy or control reflections to help prevent unauthorized viewing of screen information or to improve display contrast.

Durable protection for displays in healthcare environments

3M™ Protection Films protect displays against damage that can occur from everyday use. Remarkably thin and durable, front-surface films are available in a variety of finishes to enhance your view and maintain the integrity of display surfaces. Engineered with a low-tack adhesive, the films are easy to apply and easy to remove.

3M™ Glossy Protection Film

- Glossy finish, optically clear, ultra-thin film.
- Greater than 93% transmission keeps displays bright with no color distortions.

3M™ Glossy LR Protection Film

- Low reflection coating offers clear, sharp display enhancement and ambient light management.

3M™ Anti-Reflection Matte Non-Conductive Protection Film (ARMR220 NC)

- Advanced non-conductive coating technology protects displays against scratching and damage.
- Features include an anti-reflection and anti-glare coating.
