

3M™ 360 Encompass™ System

- Integrates computer-assisted coding, documentation improvement, quality metrics and analytics into a single application
- Provides accurate, complete, and compliant data, while improving workflow efficiencies and identifying processes that impact patient care in real-time
- Is the only system that fully integrates the market-leading 3M™ Coding and Reimbursement System

The 3M advantage

The **3M 360 Encompass System** is the only solution that seamlessly integrates computer-assisted coding, clinical documentation improvement, quality metrics, and analytics into a single application to capture, analyze, and advance patient information, across the continuum of care.

3M 360 Encompass can help you break down the silos that traditionally separate clinical documentation and coding workflows and also apply the cost- and time-saving benefits of 3M-proprietary natural language processing (NLP) technology to your coding process.

The challenge: Changing payment and reimbursement in health care

Health care is changing. You see evidence of it every day, and you know that the biggest changes are yet to come. Healthcare reform and the transition to ICD-10 bring challenges and opportunities requiring a new way of doing things.

Now more than ever, hospitals need a new way of solving the healthcare coding and reimbursement puzzle. You will need full, complete documentation for the rapid move toward a pay-for-outcomes model. Add to that the increased volume of codes, the present and future coder shortage, and the need for ICD-10 training—not just for coders but for many in the hospital—the word “challenging” doesn’t begin to describe it all.

The solution: 3M 360 Encompass

The **3M 360 Encompass System** helps you to meet these challenges by seamlessly integrating computer-assisted coding (CAC), clinical documentation improvement (CDI), quality metrics, and analytics into one application that helps capture, analyze, and advance patient information across the care continuum. 3M 360 Encompass can help integrate and streamline clinical documentation and coding workflows, so coders and CDI specialists are able to work from the same content, reducing duplication.

For example, 3M 360 Encompass gives CDI specialists visibility into the auto-suggested codes, allowing them to identify the working DRG sooner in a patient’s stay. In addition, the **natural language processing (NLP) engine** in 3M 360 Encompass can locate evidence in the documentation that the CDI specialist may have overlooked and also identify information that may be missing and then auto-suggest a physician query—all while the patient is still in-house.

The 3M 360 Encompass System uses NLP to review the documentation and identify key quality metrics, including potentially preventable readmissions (PPRs) and complications (PPCs), as well as patient safety indicators (PSI), concurrent to the patient’s stay. This gives you the opportunity to take action necessary to help prevent future quality issues with that patient.

3M™ 360 Encompass™ System

Why use an integrated application?

An integrated application can help you improve and streamline your workflows and build synergies by having your content work together. The 3M 360 Encompass System:

- Builds intelligence into worklist assignments based on the system's computer-assisted coding analysis for concurrent reviewers and coders including the same edits/content for ICD-10
- Provides early warning indicators when documentation is insufficient
- Lets the user derive a concurrent working DRG at the beginning of a patient visit
- Offers a role-specific, at-a-glance dashboard of information for managing productivity and workload
- Auto-suggests physician queries to enable effective and immediate communication between coders, CDI specialists, physicians and care coordination teams
- Has real-time identification of quality metrics, including PPCs, PPRs and PSI

Built on leading-edge 3M solutions

With the **3M™ Coding and Reimbursement System** as its foundation, 3M 360 Encompass combines 3M's industry-leading clinical documentation improvement knowledge and software tools with proprietary NLP capabilities.

The system combines 3M expertise in the regulatory environment with powerful statistical methodologies to create a comprehensive NLP engine that uses both expert rules and statistics to deliver computer-assisted coding, clinical documentation improvement, and quality metrics. The result is that it can help you improve the accuracy of your reimbursement and reduce costs across the healthcare continuum.

Additional features and benefits

- Helps improve productivity and case mix index
- Highlights the difference between physician documentation and actual care delivered
- Allows you to leverage existing capacity to prepare for the ICD-10 transition
- Provides concurrent, not retrospective, access to actionable data

Have confidence in your coding

With 3M Health Information System's 30-year legacy as a leader in coding, classification, and reimbursement systems, you can have confidence in your codes as you face regulatory updates and ICD-10 implementation. This legacy is at the heart of the 3M 360 Encompass System. Automating coding is complex, and solving a complex problem requires a system you can rely on from a company that is a trusted thought leader in addressing coding and reimbursement challenges. 3M can help you remain accurate, complete and compliant when it comes to your coding, documentation and reimbursement.
