

## 3M™ ChartScriptMD™ Software

- Enhance report quality and consistency with technology-driven workflow based on user preferences
- Create consistent, high-quality documents using text inserts, standard dictation, or speech recognition
- Streamline how clinicians create, edit and complete patient documentation to improve turnaround times and leave more time for patient care

### Quick, accurate, versatile

With **3M ChartScriptMD Software**, clinicians can select the methodology that works best for them, rather than being forced into a particular electronic health record (EHR)-based tool set. To create patient care documentation that flows into an EHR system, clinicians can choose to use:

- Report templates accessed by voice commands, mouse, or keyboard
- Real-time voice-to-text translation via front-end speech recognition
- Traditional dictation and transcription

### The challenge

Healthcare providers are particularly sensitive to any extra time required to complete a document. They want a solution that supports their own preferences with easy-to-use technology that can reduce turnaround times and help automate the workflow. They are all for cutting transcription costs, but not at the expense of adding cumbersome, non-intuitive steps to their work processes.

### The 3M solution

**3M ChartScriptMD Software** lets busy clinicians create, edit and sign patient documentation using customized workflows that fit best with how they care for patients. They can manage content requirements with template-driven document creation, while also capturing the narrative needed to tell the full patient story.

3M ChartScriptMD is a system that puts providers in complete control of their documentation process, allowing them to complete and share reports quickly and accurately. 3M ChartScriptMD is the bridge between traditional dictation/transcription and direct clinician EHR data entry, enabling providers to move from one document creation method to another at their own pace, increasing provider satisfaction and system acceptance/adoption.

3M ChartScriptMD also integrates with EHR applications to enable flow of current patient data to the provider and completed documents back to the EHR.

### Get it right the first time

3M ChartScriptMD Software allows providers to keep pace with the growing demand for faster, more detailed documentation, while maximizing time for patient care and streamlining paperwork. The system is designed to help:

- Give clinicians the necessary patient information to create, edit and authenticate clinical documentation

## 3M™ ChartScriptMD™ Software

- Reduce errors of omission and recoding time for hospitals and professional services
- Increase compliance with best practices and accreditation standards
- Reduce A/R days through improved documentation turnaround and streamlined physician queries

### A versatile solution

To achieve all the functionality described in this document, 3M ChartScriptMD must be integrated with the following applications:

- **3M™ ChartScript™ Software**—Documents initiated in 3M ChartScriptMD can be sent to transcriptionists working in 3M ChartScript for review, editing, and post-signature distribution
- **3M™ Electronic Signature Authentication (ESA) Software**—Enables authorized providers to sign and edit patient documentation anytime from virtually anywhere
- **3M™ VoiceScript™ Software**—Dictation created in 3M ChartScriptMD Software is sent to 3M VoiceScript to be accessed by a transcriptionist or back-end speech recognition engine

3M ChartScriptMD can also be used with these **optional** applications:

- **3M™ ChartFact™ Software**—Tracks the status of incomplete patient documents and generates a worklist for providers to review in 3M ChartScriptMD to easily see what documents they need to address
- **3M™ 360 Encompass™ System**—Documents created with 3M ChartScriptMD Software can be made available in 3M 360 Encompass for analysis of coding and documentation improvement

### Up-to-date technology and security

Built on a platform designed to enhance current operating environments while remaining open to future technology, 3M solutions:

- Are compatible with industry-standard operating systems such as Microsoft® Windows® XP and Windows® 7 (recommended)
- Are HIPAA-enabled applications that operate using today's standard PC and networking technology
- Use Nuance's SpeechMagic™ speech recognition technology
